

Non-Structural Flood Damage Reduction Case Studies Report

Status:

In Progress

IWR Contact:

Lillian Almodovar (Lillian.Almodovar@usace.army.mil)

Purpose:

This report will examine the legal and institutional framework as well as policies and procedures of both federal and nonfederal agencies that aim at the reduction of flood damages through nonstructural alternatives. This examination will be based on the compilation of about 7-10 case studies and will include an examination of factors that have lead to the approval, authorization and ultimate implementation of projects having largely nonstructural components or a structural project with a nonstructural feature

Objective:

Development of approximately 7-10 studies of nonstructural projects under various development stages identified in IWR 2004 Survey of Nonstructural Projects and projects suggested by other federal and nonfederal flood study managers. The case studies would cover the range of nonstructural alternatives and include combinations with structural alternatives
